DETAILED ACTION

1. Acknowledgment is made of applicant's Preliminary Amendment filed August 14, 2006. The changes and remarks disclosed therein were considered.
2. Claims 1-10 are pending in the application.

Drawings

3. The drawings were received on September 27, 2007. These drawings are review and accepted by examiner.

Priority

4. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

5. Acknowledgment is made of applicant's Information Disclosure Statement (IDS) Form PTO-1449, filed April 10, 2007. The information disclosed therein was considered.

Allowance

6. Claims 1-10 is allowed.

The following is an examiner's statement of reasons for allowance:

The prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Choi et al and Kurumada et al taken individually or in combination, do not teach the claimed invention having the following limitations, in combination with the remaining claimed limitations:

As in claims 1 and 2: **“a sync read control circuit for releasing an upper group of a received address as a memory access address in synchronization with the clock signal and for sequentially modifying and releasing as a burst address a remaining of the received address excluding the upper group in synchronization with the clock signal”** in a semiconductor memory having a burst mode reading function of continuously reading data in synchronization with a clock signal as claimed in the independent claims 1 and 2. Claim 3 is also allowed because of its dependency on claim 1 or 2; or

As in claim 4: **“a sync read control circuit for releasing an upper group of a received address as a memory access address in synchronization with the clock signal and for sequentially modifying and releasing as a burst address a remaining of the received address excluding the upper group in synchronization with the clock signal”** in a semiconductor memory having a burst mode reading function of continuously reading data in synchronization with a clock signal as claimed in the independent claim 4. Claim 5-7 are also allowed because of their dependency on claim 4; or

As in claim 8: **“an address control circuit is constructed as a composite circuit having a master circuit of a flip-flop connected at an upstream side of a decoder and a slave circuit of the flip-flop connected at a downstream side of the decoder, which is arranged responsive to a read switching signal, a clock signal, a synchronous address signal synchronized with the clock signal, and an asynchronous address signal received from the outside”** in an address control

circuit provide in a semiconductor memory as claimed in the independent claim 8.

Claims 9-10 are also allowed because of their dependency on claim 8.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
